Continuation of Substance of Interview including description of the general nature of what was discussed: The Examiner proposed adding to claim 23 a limitation reciting the median pore diameter being less than 15 micrometers to define the claim over the prior art of record and place the application in condition for allowance. Applicants' attorney did not agree to the proposal on the basis that the additional limitation is not necessary to distinguish the claim over the prior art. The Examiner noted that since Beall teaches magnesium oxide being a "raw material" in Table A, the reference teaches one of ordinary skill in the art that the MgO can be substituted for talc. Applicants' attorney disagreed with this assesment since all of the Beall Examples exclusively use talc as the starting raw material. .
